Step 1: npm init

Step 2: npm install cypress --save-dev

Step 3: npm install npx

Step 4: npm i -D cypress-cucumber-preprocessor

Step 5: npm install --save-dev cypress-cucumber-preprocessor

Step 6: npx cypress open

Step 7: cypress.config.js

```
const cucumber = require('cypress-cucumber-preprocessor').default

module.exports = defineConfig({
  e2e: {
    setupNodeEvents(on, config) {
      on('file: preprocessor', cucumber ())        // just add this line
    },
    specPattern: "**/*. feature",                  // just add this line

  },
});
```

Step 8: package.json

```
 "cypress-cucumber-preprocessor": {
   "nonGlobalStepDefinitions": true,
   "step_definitions": "cypress/e2e/*"
 }
```

Step 9: Create feature file & Step_definition file

Step 10: npx cypress open
